Jim-  
For these wells, under standard TAT they are not scheduled to compete until the end of next week. I just talked to the SVOC analysis lab and they felt that they could complete by this Friday, and we could report then or Monday at the latest.

Patrick,

Scott discussed with you running caprolactam on the RT well samples for the Grenada site. I would like to know when you are projecting that we will receive the results under standard turn and what our options are for accelerating the samples.

Thanks,
